

Environmental Policy

The tarmac we use has 25% lower carbon emissions than a standard tarmac or asphalt aggregate. A low heat tarmac option is now recommended for footpaths as an eco-friendly surface.

We use re-claimed materials when possible, trying to lower our impact on the environment.

Supplies for each project are calculated accurately by our estimators to minimise waste.

It is Blackoak's interest that materials are recycled and re-used when possible, our company always aims to do so to achieve this.

Old unwanted stone is always saved and kept for re-use in our large secure unit. Re-claimed stone is also an option available to our clients producing a cost-effective solution but also offering a unique option on your installation.

A Fresh approach to groundwork.....
